The D-Link DWM-321 4G LTE In-Vehicle Hotspot is an easy-to-deploy high-performance router with mobile connectivity to allow easy access to mobile broadband networks. It's the easiest way to deploy an in-vehicle concurrent dual band hotspot gateway, providing passengers with Wi-Fi access in a moving vehicle such as public transport services.
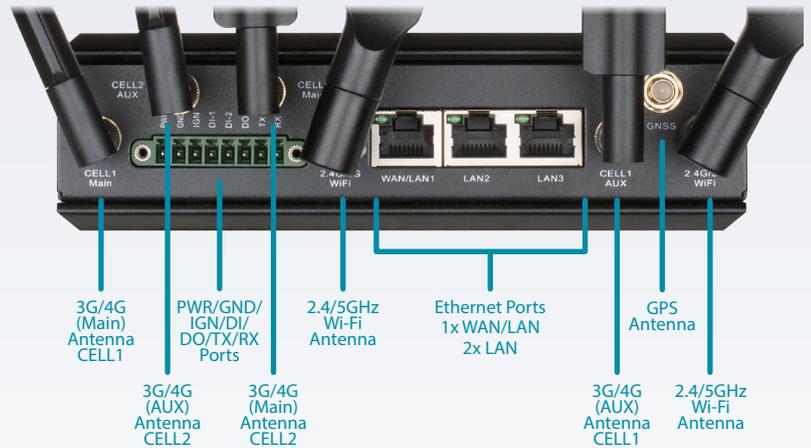

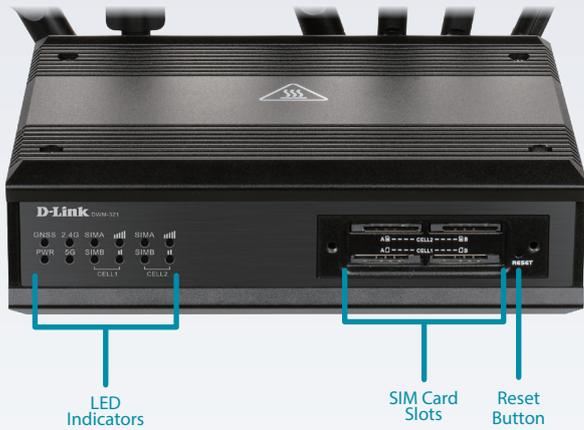

Connectivity On the Go

The DWM-321 acts as a hotspot gateway to let passengers in a vehicle connect to a 4G/LTE mobile connection, with fast downlink speeds of up to 150 Mbps, and uplink speeds of up to 50 Mbps. Deploy it in a moving vehicle to give passengers fast, responsive Internet access on the go. The blazing fast LTE connection allows multiple users to access e-mail and stream music and video all at the same time. Configurable dual-SIM fallback provides reliability and flexibility in mixed network environments.

Reliable Virtual Private Networks

The DWM-321 4G LTE In-Vehicle Hotspot lets you create a high-speed Virtual Private Network (VPN) for access remotely or locally. It supports different tunneling technologies to establish tunnels between multiple sites for data transferring, such as IPSec, OpenVPN, L2TP (over IPSec), PPTP, and GRE. Advanced functions such as full tunnel, tunnel failover, tunnel load balance, NetBIOS over IPSec, NAT Traversal, and Dynamic VPN are also supported. With the DWM-321 you'll have all the tools you need to create the ideal VPN solution for your network.

Robust

The industrial-grade casing means the DWM-321 provides reliable high-speed connectivity in extreme conditions. The corrosion-resistant zinc-plated steel case, wide operating temperature and humidity tolerance mean that the DWM-321 is ready for the most demanding M2M applications in virtually any environment. Wall mounts allow the DWM-321 to be mounted virtually anywhere for optimal connectivity.
